HOK — Agency Operations Platform

Requirements Summary · Version 0.3 (decisions included) · 13 Oct 2026

> **What are we building?** One website with two sides. The **public side** is the firm's portfolio. The **private side** lets the firm manage its **clients**, plan **events & shoots**, keep **content links** in one place, share a **live dashboard with each client**, and **assign tasks** to the team.
>
> **The main problem it solves:** no more lost Drive links, missed shoots, or client feedback buried in chats.

1. Who uses it?

User	What they do
Admin	Controls everything. Sees all clients & all data. Creates staff accounts and stage templates. The only one who assigns tasks. Can also have their own clients.
Social Media Manager	Manages **their own clients**: events, calendar, content links, client comments. Gets tasks from Admin.
Marketing Manager	Same as Social Media Manager.
Marketing Agent, Developer, Editor	**Tasks only**: receive tasks from Admin, update the status with comments, and mark them done.
Client (outside)	No login. Opens a **private link** to see their dashboard and leave comments.

🔒 **Privacy rule:** a manager sees only their own clients. Nobody else can see them except Admin. One client = one manager.

2. Who can do what?

Feature	Admin	Social Media / Marketing Manager	Mkt Agent / Developer / Editor	Client (link)
Manage staff accounts	✓	✗	✗	✗
Stage templates	✓ **create**	pick one	✗	✗
Client profiles	✓ **all**	✓ **own**	✗	✗
Events & shoots	✓ **all**	✓ **own**	✗	view
Content links (assets)	✓ **all**	✓ **own**	✗	✗
Calendars	✓ **all**	✓ **own**	✗	view
Client comments	✓ **all**	✓ **own**	✗	✓ **post**
Assign tasks	✓	✗	✗	✗
Do / update / close my tasks	✓	✓	✓	✗
Dashboard	everything	my clients	my tasks	my events

3. Main features

1 Client Profiles

- Business name, logo link, contact, social handles, services, time zone, notes
- Each client belongs to one manager
- Admin can move a client to another manager

2 Events & Shoots

- Shoot, campaign, meeting… with date, time, time zone, place
- Admin makes **stage templates** (e.g. "Photo Shoot": Planned → Shoot → Editing → Client Review → Completed)
- Manager picks a template when creating the event; its stages are used as they are

3 Content Links (Assets)

- Paste a link (Drive, Dropbox, Canva…). **No file upload**
- Add type (photo / video / doc), a comment and **tags**
- Search by tag or comment, so you never lose where content is
- Internal only. Clients don't see these

4 Calendars

- **Client calendar**: all events of one client
- **My calendar**: all my clients' events + my own events
- **Admin calendar**: whole company
- Works across **time zones**: everyone sees times in their own zone

5 Client Portal (shared link)

- Manager creates a private link for the client. No PIN, no login
- Client sees: current event & its stage, upcoming events, calendar
- Link can be turned off or replaced anytime. Simple plain design

6 Client Comments

- Client writes a comment from the portal
- Only that client's manager gets a **push notification**
- Manager sets status: **Received** → **In Progress** → **Solved** and can reply

7 Team Tasks

- Admin gives a task to **one** staff member
- Staff updates the status with a comment: To Do → In Progress → **Done** (or Blocked). They close it themselves
- Admin is notified of every update and can reopen

8 Editor Tasks (extra fields)

- **Raw files link** (Google Drive)
- **Reference edit link** (the style to follow)
- **Script**

9 Notifications

- Phone/browser push + bell icon in the app
- For: new client comment, new task, task update (event reminders later)
- On iPhone: add the site to the Home Screen to get push

10 Dashboards

- Each user sees a home screen made for their role
- Today's events, pending comments, due tasks, progress at a glance

4. How it works: examples

New client

Manager adds client → Creates portal link → Sends link to client on WhatsApp

Shoot day

Create event, pick “Photo Shoot” template → Shows on calendars & portal → Stage moves to “Editing” → Client sees progress

Saving content

Files are in Drive → Manager pastes link + tags “reel”, “diwali” → Found later by tag search

Client feedback

Client comments “change music” → Manager gets push → In Progress → Solved + reply

Editing task

Admin assigns “Edit reel” + Drive link, reference, script → Editor updates status + comment → Editor marks Done → Admin notified

5. Decisions made

Topic	Decision
Marketing Agent	**Tasks only (like Developer / Editor)**
Sharing clients	**No. One manager per client; Admin can move it**
Portal security	**Link only; can be turned off or replaced**
Event stages	**Admin-made templates, picked when creating an event**
Content links on portal	**Not in first version**
Who gets pushed on a client comment	**Only the client’s manager**
Who assigns tasks	**Only Admin**
Task rules	**One person per task; they can mark it Done**
Mobile	**Mobile-friendly website you can install (no app store)**
Size	**~20–50 staff, ~100–500 clients**
Time zones / language	**Multiple time zones, English**
Email / WhatsApp messages	**None. Notifications are phone/browser push + the in-app bell only**
Portal look	**Plain, no branding**
Google Calendar	**Dropped for now**
Deadline	**No fixed date. Quality first**
Technology & look	**Same setup and same design system as the Needleye project**

Topic	Decision
Portfolio website	**The HOK template becomes the firm's public website, in the same app. Moved in as it is now; redesigned with real content later**
Hosting	**First on our own machine. Later: Railway (backend), Supabase (database + logins), Vercel (website)**

6. Build plan

Phase	What gets built
Phase 1 · MVP	Portfolio website (template moved in) · Login & roles · Client profiles · Stage templates & events · Calendars · Content links · Team tasks (incl. editor fields) · **Client portal & comments** · Push + in-app notifications · Dashboards
Phase 2	Client to-do lists · Reminders 2 hours before (bell animates) · Global search · Activity history · Last seen · Link previews · Reports
Later	Portfolio redesign with the firm's real services, work, team and blog

7. Not included (for now)

- Uploading or storing actual photo/video files (we only save links)
- Posting directly to Instagram / Facebook etc.
- Billing, invoices, payments · Ad performance / analytics reports
- App-store mobile apps · Email/WhatsApp messages to clients
